

SCIENCE & TECHNOLOGY INCUBATOR PROGRAM

In partnership with the City of Monrovia

The Science & Technology Incubator Program (STIP) established by the City and Oak Crest Institute of Science has as its primary mission the expansion of the overall science and technology ecosystem in Monrovia. Through this program, we offer access to incubator lab space for early and mid-phase start-up companies. In addition, the STIP initiative offers cost-effective access to cutting edge laboratory equipment on a shared basis to foster connections between local science and technology firms, while also providing true workforce development opportunities to train the next generation of scientists and lab technicians. We hope you will join us in our efforts to make Monrovia the premier place for science and technology start-up ventures in the San Gabriel Valley!

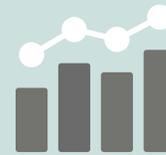

INCUBATOR SPACE AVAILABLE!

Incubator space is now available for early and mid-phase start-up firms. The open-plan design features dedicated laboratories for atmospheric chemistry and aerosol research, biomedical R&D, tissue culture, spectroscopy, and more. For additional information, please contact Dr. Christopher Buser at (626) 817-0883 or email at c.buser@oak-crest.org.

ACCESS TO STATE OF THE ART EQUIPMENT

Developed by Oak Crest Institute of Science, a shared-use agreement allows entities participating in the STIP program cost-effective access to key science and technology research and development equipment.

WORKFORCE DEVELOPMENT PROGRAM

The Workforce Development Program establishes a school-to-job pipeline for Monrovia students interested in science and technology by providing mentorship, educational, and training opportunities. The program links students to career pathways with employers in the greater Monrovia area.

BUILDING CONNECTIONS WITH THE COMMUNITY

Hosted by Oak Crest Institute of Science, those who are part the STIP program and the technology community in Monrovia have the opportunity to attend social gatherings on a bi-annual basis to network with peers and leaders in the field.

JUNIOR RESEARCHER SCIENCE ACADEMY

Oak Crest Institute of Science leads the annual development and execution of the premier summer science camp program for Monrovia students known as the Junior Researcher Science Academy that runs for six - eight weeks sessions during the summer months.
